The questions that I've solved are below:

- 1) First Letter to Appear Twice
- 2) Equal Row and Column Pairs

1) First Letter to Appear Twice

```
class Solution {
public:
    char repeatedCharacter(string s) {
        map<char,int> m;
        for(auto x : s){
            m[x]++;

            if(m[x] == 2){
                return x;
            }
        }
        return 'a';
    }
};
```

2) Equal Row and Column Pairs

```
class Solution {
public:
    int equalPairs(vector<vector<int>>& grid) {
        int ans = 0;
        int n = grid.size();
        int m = grid[0].size();

        for(auto x : grid){
            vector<int> row = x;

            for(int j=0;j<m;j++){
```

```
    bool check = true;
    for(int i=0;i<n;i++){
        if(row[i] != grid[i][j]){
            check = false;
            break;
        }
    }
    if(check == true){
        ans++;
    }
}

return ans;
}

};
```
